Sebastian Bennett

WEB DEVELOPER

TO WHOM IT MAY CONCERN,

A Web developer is a kind of programmer who specializes in the development of applications relating to the World Wide Web or distributed network applications, which typically run protocols like HTTP from a Web server to a client browser using associated programming languages like HTML/CSS, C#, Ruby and PHP to name a few.

A Web developer is usually concerned with the back end or the programming aspect of creating a website or Web application and is not to be confused with a Web designer, who only deals with the aesthetics of a website or application, although many professionals have both skill sets.

Web developers can come from different educational disciplines because Web development is one of those fields where once a programming language is learned, much of the rest of the skill set can be acquired through practice. Although there are no formal educational requirements to be able to work as a Web developer, a lot of employers do prefer formally educated people who come from any computer related field and have Web development skills.
